

# Diagram 1: The Requirements Engineering Framework

SLIDE 15

**KEY EXAM POINT:** Management runs THROUGHOUT all stages — it is the outer ring, not a final step. Elicitation and Analysis have a bidirectional relationship — they loop back and forth until requirements are complete.

## Diagram 2: Knowledge Types — Tacit vs Explicit

SLIDES 21–24

**KEY POINT:** Tacit knowledge is the biggest source of missing requirements. A skilled BA uses techniques that reach ALL four quadrants — not just the easy top-left where knowledge is already articulate.

## Diagram 3: Converting Tacit Knowledge to Explicit

SLIDE 24

*Different elicitation techniques unlock different stages of this conversion process*

**EXAM TIP:** This flow explains WHY we use multiple techniques — each one targets a different type of knowledge. Observation = Observe stage. Storytelling/Scenario = Recount stage. Prototyping = Enact stage.

## Diagram 4: Types of Requirement

SLIDE 46

MOST TESTED: Branding = General (NOT non-functional). Usability, Archiving, Performance, Security = Non-Functional. This distinction appears in Sample Paper Q15 directly.

## Diagram 5: MoSCoW Prioritisation

SLIDE 73

⚠️ Priorities assigned DURING ANALYSIS — not when requirements are first captured

**EXAM POINT:** 'W' = Want/Won't Have THIS TIME — not permanently excluded. Priorities are set during analysis with reference to the business objectives. They can change as the project evolves.

## Diagram 6: Vertical vs Horizontal Traceability

SLIDE 98

**MOST COMMON EXAM SWAP:** Vertical = objective alignment (up/down). Horizontal = lifecycle tracking (left to right across time). Specimen Paper Q20: clothing manufacturer = HORIZONTAL. Sample Paper Q40: need BOTH = document Source + Business Objective alignment.

## Diagram 7: Change Control Process

SLIDES 99–100

⚠️ This process only applies AFTER requirements have been BASELINED (formally signed off)

**CRITICAL: Order matters! Document → Analyse → Consult → Decide**

Many candidates put Consult FIRST — this is WRONG.  
You must know the impact (Analyse) BEFORE you consult stakeholders.

**Sample Paper Q36: Answer A = Document → Analyse → Consult → Decide**

## Diagram 8: The 7 Analysis Filters

SLIDE 62

Apply these filters when reviewing the WHOLE SET of requirements

**New in v6.1: Filter 6 "Quality of Expression" was added to the syllabus**

Remember: Filters 1-4 check the SET. Filters 5-7 also apply individually.

**Conflicts ≠ Duplicates. Solutions ≠ Feasibility. Know the difference.**

## Diagram 9: Modelling Techniques — Which Model Does What?

SLIDES 74–81

| MODEL                                                    | WHAT IT SHOWS                                                                              | BEST FOR REQUIREMENTS                                                           | DOES NOT SHOW                                         | EXAM SPOTLIGHT                                  |
|----------------------------------------------------------|--------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|-------------------------------------------------------|-------------------------------------------------|
| <b>USE CASE</b><br>(Function Model)<br>Slide 76          | System features (use cases), actors who use them, system boundary and access control       | Access & security req.<br>Features of the system<br>Who uses what function      | Data structure.<br>Activity sequence/flow.            | <b>Q9 Specimen: NOT for showing flow!</b>       |
| <b>UML ACTIVITY</b><br>(Replaced BAM)<br>v6.1 new        | ORDER of activities, decisions, swim lanes (who does what), events that trigger activities | Process flow requirements<br>Operational guidance rules<br>Decision-based rules | Data. Features by actor.<br>Customer emotions.        | <b>Q14 Specimen: Operational Guidance</b>       |
| <b>BPMN</b><br>Business Process                          | End-to-end process, swim lanes for roles, access control, decision gateways                | Access & security (swim lanes)<br>Flow and sequence                             | Data relationships.<br>Customer feelings.             | <b>Both BPMN &amp; Use Case show access</b>     |
| <b>DATA MODEL</b><br>UML Class Model<br>ERD removed v6.1 | Data entities (classes), their attributes, and relationships between them                  | Data constraints / rules about data relationships                               | Process flow. Activities.<br>Who uses features.       | <b>Q9 Specimen: NOT for triggers/activities</b> |
| <b>CRUD MATRIX</b>                                       | Cross-checks use cases vs data — who Creates, Reads, Updates, Deletes which data entity    | Data rule verification<br>Gaps in data creation                                 | Process flow. Features.                               | <b>Q13 Specimen: Cross-check rules</b>          |
| <b>CUSTOMER JOURNEY MAP</b>                              | Customer emotions, perceptions, touchpoints, stages, personas<br>FROM THE CUSTOMER'S VIEW  | Customer experience req.<br>Emotions at each stage                              | Business KPIs. Data flow.<br>Internal process detail. | <b>Q15 Specimen: Customer focus only</b>        |

## Diagram 10: Validation — Agile vs Linear & Stakeholder Roles

SLIDES 85–93

### LINEAR VALIDATION

**WHEN:** After BRD is complete — once

**HOW:** Formal structured review group

**OUTPUT:** Signed-off, baselined BRD

**AFTER:** All changes via formal change control

△○ Formal AND informal validation  
both exist in linear projects

### AGILE VALIDATION

**WHEN 1:** On entering the backlog  
(outlines acceptable at this point)

**WHEN 2:** When story is deemed "Ready"  
(acceptance criteria defined)

**HOW:** Less formal, ongoing refinement

**OUTPUT:** Prioritised, elaborated stories

△○ EXAM: Agile validation = TWICE  
Specimen Q7 Answer B

### Who is involved and what they do

| STAKEHOLDER      | ROLE IN VALIDATION                                   | KEY POINT                 |
|------------------|------------------------------------------------------|---------------------------|
| Business Sponsor | Ensures req. align with objectives. Chairs review.   | Typically signs off       |
| Business Owners  | Confirm accuracy of requirements for their area      | They approve — not the BA |
| SMEs             | Specialist domain knowledge — legal, compliance etc. | Business advice           |
| Developers       | Assess TECHNICAL feasibility                         | NOT business feasibility  |
| Testers          | Confirm testability, define acceptance criteria      | Can I test this req?      |
